- # 409 - 2½" Hard Splice (for shop vac size hoses)
- # 346 - Round Flare Nozzle
- # 347 - Rectangular Flare Nozzle
- # 344 - Extra Hose Link
- # 349 - 12" Rigid Flex-Lock Hose

Drill Press Dust Collector

Installation and Set-up

Our Drill Press Dust Collector provides the perfect solution for your drill press dust collection problems. The rigid flex hose is completely adjustable in length and can be re-positioned to any location in relation to your drill bit. You can add or remove hose links (extra hose links sold separately) to increase or decrease hose length, depending on your drill press. The nozzle is interchangeable with other types of nozzles (sold separately) for different projects.

Step 1

Loosen the T-knob on the Universal Hose Mount. Next, snap a single hose link into the opening on the Mount. Secure the link by tightening the T-knob on the Mount. Your hose link should be protruding from both sides of the Universal Hose Mount.

Step 2

Place the remaining hose links against the small end of the single hose link on the Universal Hose Mount. Snap the remaining Hose links to the small end of that hose link.

Step 3

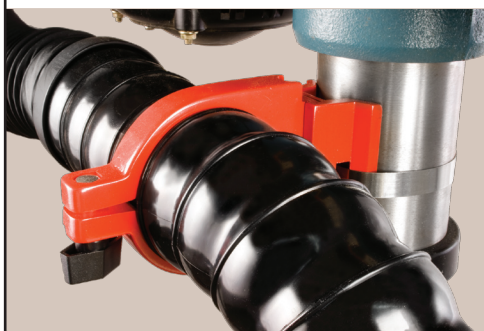

Place the yellow tapered nozzle on the end furthest from the Universal Hose Mount and snap into place.

Step 4

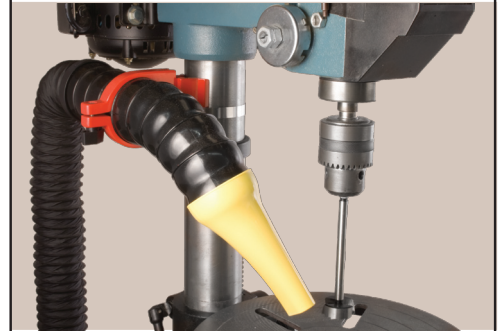

Place the 2½" Hose adaptor against the large side of the link protruding from the Universal Hose Mount and snap in place. Next, with the steel hose clamp mount the entire unit to your drill press shaft with the open end of the Universal Hose Mount Facing up as shown in the Step 5 Photograph.

Step 5

You can re-position your hose by loosening the T-knob on the Universal Hose Mount. Then add or remove hose links to achieve the proper length for your particular drill press.

Step 6

Attach a 2½" dust collection hose to the 2½" hose adaptor and secure with a hose clamp. Position your New Drill Press Dust Collector Hose anywhere you need to in relation to your drill bit. Turn on your dust collector and work virtually debris and dust free on your drill press!
